SOFTWARE LTD.

**HandCoded**  
SOFTWARE LTD.

## COMPANY

Founded in 2005, HandCoded Software Ltd. is the preeminent developer of Java and C# software for the efficient processing of FpML. Our code supports every version of FpML from the earliest 1.0 DTDs to the newest 5.x XML Schemas and can be configured to accept documents in any FpML version or just a restricted set. It can also be configured to handle bespoke extensions.

We provide the Financial industry with tools to improve FpML STP by detecting data quality issues before they become a problem.

## SERVICES

Addressing the needs of FpML implementors

## WHAT WE DO

Our Open Source toolkits allow everyone to apply the same data quality standard to their FpML documents.

*High Performance*

*Business Validation*

*Document Conversion*

*Product Classification*

*Efficient XML Parsing*

*Commercial Support Terms*

*Open Source Java and C#*

*Training for Developers*

### High Speed FpML Validation

Our toolkits contain native code implementations of the FpML validation rules plus additional support for checking code values.

We are many times faster than our nearest competitor and test more of the document as standard. Business validation does not have to be a time consuming after thought.

### Product Classification and Document Conversion

Need to know what type of product a trade contains? We have a tool that will work it out and allow you to derive useful behavioral information from it.

As FpML is an evolving standard we have tools to help translate documents to later versions of the standard.

### An Active Member of the FpML Community

HandCoded's directors have been involved with the standard since its inception in the late 1990's and remain actively involved in its development.

Future versions of the toolkit will contain tools for document matching, document creation, term sheet generation and graphical user interfaces.
